## AERIAL RESCUE TRAINING WORKSHOP

When a tree worker is injured or incapacitated aloft, typically fellow crew members are the first to respond an emergency could develop any time, and tree care professionals must know how to react.

TCIA's Aerial Rescue Training Program helps you protect your workers and meet the aerial rescue training requirements mandated by ANSI Z133.1 and OSHA.

This certificate program is designed to be used in combination with on-the-job training and practice, so that crews have the knowledge and skills needed to evaluate an emergency situation and potentially rescue an injured tree worker.
